# APPLIED RUBY PROGRAMMING

With

**RAILS**

# Program Information

**Nature of the Course**  
Theory + Practical

**Total Hours per Day**  
2 hours

**Course Duration**  
80 Hours

## Course Summary

This course is designed for individuals interested in web development and aims to provide a solid foundation in using Ruby on Rails to build web applications. Students will learn the fundamentals of Ruby, the Rails framework, and web development best practices.

# Course Details

## Module 1

### Introduction to Ruby

- Overview of Ruby and its syntax
  - Variables, data types, and basic operations
  - Control structures (if statements, loops)
  - Methods and functions
  - Object-oriented programming in Ruby
- 

## Module 2

### Introduction to Rails

- What is Ruby on Rails?
  - Setting up the development environment
  - Creating a new Rails application
  - The MVC (Model-View-Controller) architecture
- 

## Module 3

### Building a Simple Application

- Creating models, views, and controllers
  - Routing and RESTful routes
  - CRUD operations in Rails
  - Working with forms
-

#### Module 4

## Working with Databases

- Introduction to databases
  - Using ActiveRecord to interact with the database
  - Migrations and database schema
  - Data validation and associations
- 

#### Module 5

## Views and Layouts

- ERB (Embedded Ruby) templating
  - Layouts and partials
  - Asset pipeline (CSS and JavaScript)
  - Working with forms and form helpers
- 

#### Module 6

## Authentication and Authorization

- User authentication with Devise or other gems
  - Role-based access control
  - Securing routes and actions
- 

#### Module 7

## Testing in Rails

- Introduction to testing (TDD and BDD)
  - Writing and running tests with RSpec or MiniTest
  - Integration and acceptance testing
-

## Module 8

# Working with APIs

- Consuming external APIs
  - Building API endpoints in Rails
  - Authentication and authorization for APIs
- 

## Module 9

# Deployment and Scaling

- Preparing the application for deployment
  - Hosting options (e.g., Heroku)
  - Scaling considerations
- 

## Module 10

# Advanced Topics (Optional)

- Advanced Rails features (e.g., background jobs, caching)
  - Real-time features with WebSockets
  - Performance optimization
- 

## Module 11

# Building a Complete Project

- Students work on a larger project, applying the knowledge and skills acquired throughout the course.
- 

## Module 12

# Final Project and Presentation

- Students present their final projects to the class.
